1. Description

This solar powered killer lamp attracts mosquitoes by ultraviolet light, with 800V high-voltage electricity to kill insects like mosquitoes and moths. Powered by solar with one AA size 1.2V Ni MH rechargeable battery. Automatically turn off during the day, turn on at night.

Hang up, beautiful, and be there kill little flies for you.

2. Product parameters

Solar panel: 2V 2W light: UV LED

Metal mesh voltage: 800V battery: NiMH AA: 1.2V

3. How to install battery

1) Rotate the protective screen case clockwise and remove it

2) Open the battery chamber cover, install 1.2V NiMH rechargeable battery according to illustration as bellow, notice the +/- as indicated. Put cover back.

- 4) Finally, screw the protective case back by anti-clockwise.

4. Notices:

- 1) Make sure to put solar panel toward full sun. Recommended that the battery is fully charged first time.
- 2) Do not use killer lamp in inflammable and explosive places.
- 3) Forbidden to touch the high-voltage metal mesh by human body or conductive objects.
- 4) When cleaning mosquito carcass on the metal mesh, remove the battery first. After the battery is removed, please do not touch the metal net still, there is still residual electricity on the net. Do not use water or wet towel for cleaning, use insulated tools like wood handled brush. Can blow out with air, careful not to use excessive pressure.
- 5) After a long period of use, if it stops working. Maybe the battery has exceeded its service life, change battery.
